

## **PROJECT OBJECTIVES**

TEAM ID	PNT2022TMID32680
PROJECT NAME	University Admit Eligibility Predictor

### **OBJECTIVES:**

University admission Eligibility predictor is a boon to many students. University Admission Predictor System is web based application in which students can register with their personal as well as marks details for prediction the admission in colleges and the administrator can allot the seats for the students.

When students come from rural places, they find it hard to go along with the formal procedures. So, this application helps them a lot and eases out their fear. The main advantage of the project is the computerization of the entrance seat allotment process. Administrator has the power for the allotment. He can add the allotted seats into a file and the details are saved into the system.

This will not only make the admission process easy but also minimizes stress for students. The main objective of our system is to make the right choice of colleges. Avoids data redundancy and inconsistency. Easy accessibility of data. Very user-friendly.

The main objective of this project is to help the students to save their time and money that they have to spend at the education consultancy firms. And also it will help them to limit their number of application to a small number by proving them the suggestion of the universities where they have the best chance of securing admission thus saving more money on the application fees.
